- Colorants are from Klingspor

I am a firm believer of Jim Sprague in Canada. Check out his web site "spragewoodturning.ca" his work is amazing.

- When mixing the epoxy you put the colorants in as powder and use a mixing device on a drill for at least a minute to gain the best mix and then place it in the refrigerator for 2 or 3 hours and then you can pour into the wood taking care to completely cover the wood. Air pressure should not exceed 35 pounds. Keep the pressure on for 36 hours and then open the pot and check out your blob from which you will make a beautiful
